PROFESSIONAL SUMMARY

Data Analyst with experience in SQL, Python, and Power BI, backed by internship experience in automating ETL pipelines and building predictive models for customer retention. Skilled at transforming complex datasets into clear, decision-ready insights that support business decisions.

EDUCATION

University of Haripur — BS Data Science

Aug 2022 – Jun 2026

FG Degree College for Men, Wah-Cantt — FSc Pre-Engineering

Sep 2020 – Jun 2022

EXPERIENCE

Cybernet (Pvt.) Ltd — Data Science & Network Engineering Intern

Jul – Aug 2025

Islamabad, Pakistan

- Automated ETL pipelines using Python, SQL, APIs, and Airflow, reducing manual reporting workload by 30% and improving data availability for business teams.
- Built and compared churn-prediction models on FTTH-GPON customer data, reaching up to 87% accuracy and supporting customer-retention strategy.
- Integrated CRM systems with backend databases and supported network operations, helping reduce operational errors.

Digital Empowerment Network — Data Science Intern

Jun – Jul 2025

- Built a profit-prediction model for coffee shop sales data through feature engineering, turning raw transactions into a usable business tool ($R^2 \approx 0.99$).
- Built and evaluated additional ML classifiers across public datasets (SpaceX landing prediction, email spam/ham classification), reinforcing end-to-end modeling skills.

PROJECTS

Telecom Customer Retention & Revenue Intelligence Dashboard

2026

SQL, Python, Power BI

- Built a comprehensive customer analytics solution using public telecom data, transforming raw customer, service, and billing records with SQL and Python to create analysis-ready datasets.
- Developed an interactive, stakeholder-facing Power BI dashboard tracking revenue at risk, customer segments, tenure trends, and service-plan performance, giving business teams a clear reporting view beyond raw churn metrics.
- Applied predictive modeling to flag high-risk customers, translating findings into targeted recommendations for the retention team.

Intelligent Data Assistant — Final Year Project

2026

Python, Streamlit, Scikit-learn, Sentence-Transformers, Pandas

- Built a no-code application enabling non-technical users to upload CSV or Excel data and run automated preprocessing, text clustering, and predictive modeling.
- Added feature-importance analysis and visual pattern discovery using K-Means clustering and t-SNE dimensionality reduction.

SKILLS

Data Analysis & BI: SQL, Power BI, Data Cleaning, Data Visualization, Exploratory Data Analysis, Dashboard Development, KPI Reporting

Programming & Data: Python, Pandas, NumPy

Data Engineering: ETL Processes, APIs, Airflow, Data Integration

Machine Learning: Scikit-learn, Regression, Classification, K-Means Clustering, PCA, t-SNE, Predictive Modeling

Databases & Tools: Streamlit, GitHub, MongoDB
