PROFESSIONAL SUMMARY

Data Science graduate specializing in Machine Learning, NLP, and LLM-powered applications. Experienced in developing and evaluating ML models, working with transformer embeddings, and building end-to-end RAG-based systems. Comfortable taking projects from raw data and preprocessing through model development, retrieval, and application development.

EDUCATION

University of Haripur — *Bachelor's in Data Science*

Aug 2022 – Jun 2026

FG Degree College for Men, Wah-Cantt — *FSc Pre-Engineering*

Sep 2020 – Jun 2022

EXPERIENCE

Cybernet (Pvt.) Ltd — **Data Science & Network Engineering Intern**

Jul – Aug 2025

Islamabad, Pakistan

- Built and evaluated Logistic Regression and Random Forest models for customer churn prediction, while applying K-Means clustering for customer segmentation on FTTH-GPON data, achieving up to 87% accuracy on the internship dataset.
- Automated ETL pipelines (Python, SQL, APIs, Airflow) feeding model training data, and integrated CRM systems with backend databases and Huawei OLT modules.

Digital Empowerment Network — **Data Science Intern (Remote)**

Jun – Jul 2025

- Developed and evaluated multiple ML classifiers to predict SpaceX Falcon 9 first-stage landing outcomes, achieving 92.3% accuracy on a public benchmark dataset.
- Built an NLP-based spam/ham email classifier using text preprocessing and machine learning techniques for automated email classification.
- Developed a profit-prediction model for coffee shop sales data through feature engineering and regression analysis, identifying key drivers of sales performance.

PROJECTS

Geopolitical News Chatbot

2026

Python, Microsoft GraphRAG, MongoDB, Google Gemini 2.0 Flash, Streamlit

- Built a RAG-powered chatbot over 100 geopolitical news articles, using Microsoft GraphRAG to construct a knowledge graph for context-aware retrieval beyond standard keyword or vector search.
- Integrated Gemini 2.0 Flash for LLM-based answer generation and Gemini Embedding 001 for semantic retrieval, with a 24-hour auto-reindexing pipeline to keep the knowledge base current.

Intelligent Data Assistant — **Final Year Project**

2026

Python, Streamlit, Scikit-learn, Sentence-Transformers, Pandas

- Built a no-code ML platform running automated preprocessing, NLP clustering, and predictive modeling on uploaded CSV/Excel datasets, no Python required from the end user.
- Used Sentence-Transformer embeddings, K-Means clustering, and t-SNE dimensionality reduction to detect hidden structure in text data, with a one-click Random Forest trainer and feature-importance analysis built in.

SKILLS

Programming & Data: Python, SQL, Pandas, NumPy, MongoDB

Machine Learning: Scikit-learn, PyTorch, Regression, Classification, Random Forest, K-Means Clustering, LightGBM, SMOTE

NLP & LLMs: Sentence-Transformers, BERT, Embeddings, RAG, GraphRAG, Semantic Search, Text Summarization

Data Analysis & Visualization: Power BI, Excel, PCA, t-SNE

Tools & Technologies: Streamlit, Airflow, APIs, Git, GitHub
